CoCoRaHS Field Photos . . . now housed at a new home. Help put your photo on the map!

Are you going to be out and about over Labor Day? We have a new way for you to submit Field Photos, which help us understand what wet, dry, and everything in between looks like for a given location.

Visit our page: https://arcg.is/11OSiL and upload up to five photos.

Tell us where you are: The best way to position the location marker correctly is by typing the name of the place in the box that says “Find address or place.” Depending on browser settings, clicking on the round compass icon may also work.

Help us QC: The “Select your state and county” box below doesn’t position the marker but it will tell us if something has gone wrong in the previous step.

When the photos were taken: Photos should be from a single day, but you can fill out the form more than once if you’d like to submit photos from different days.

How dry or wet is it? Please use the 7-point scale (this should look familiar!) to rate conditions from Severely Dry to Severely Wet.

Land use: Tell us what we’re looking at, using one of the checkboxes or “other.”

Upload photos: You can upload up to 5 photos of 10 MB each, if you are the photographer or have permission to share the photo. Please be sure to use the description field below for credit and caption information: Who took the photo, what is the location, what is the date, and what is it showing us? By
uploading a photo, you agree that it may be used and shared for educational and management purposes.

**Tell us more:** Please provide a description or caption that lets us know what we should be seeing. Contact info: Please provide your name and email in case we need to contact you for more information. We won’t display it.

Field Photos is transitioning to a new home at the National Drought Mitigation Center, in partnership with CoCoRaHS, SCIPP, and the U.S. Department of Agriculture. The photos you submit will become part of a Visual Drought Atlas, to help us understand the effects of drought on different landscapes, and, also important, to help us understand what normal looks like for different parts of the country at different times of year.

While we have traditionally encouraged Field Photos over major holidays when you are likely to be out and enjoying the landscape, you are welcome to submit photos year-round.
